

Subject Description Form

Subject Code	COMP 3211
Subject Title	Software Engineering
Credit Value	3
Level	3
Pre-requisite / Co-requisite/ Exclusion	Pre-requisite: COMP 2011
Objectives	<ol style="list-style-type: none"> 1. To provide students with a general knowledge of the application of software engineering techniques in different stages and aspects of software development; 2. To provide students with practice in applying the theories, concepts and techniques acquired during lectures through the actual accomplishment of a case study project.
Intended Learning Outcomes	<p>Upon completion of the subject, students will be able to:</p> <p><u>Professional/academic knowledge and skills</u></p> <p>(a) apply software engineering techniques in the systems specifications and design stages of software projects;</p> <p>(b) acquire concepts in software quality assurance and be able to test software applications;</p> <p>(c) apply software engineering techniques to real-life case study projects;</p> <p><u>Attributes for all-roundedness</u></p> <p>(d) solve complex problems in groups and be able to communicate effectively through project presentations;</p> <p>(e) communicate in writing with technical documentation throughout the various stages of project development.</p>
Subject Synopsis/ Indicative Syllabus	<ol style="list-style-type: none"> 1. Software process Software process and process models; component-based development; software reuse, CASE, agile development. 2. Specification and requirement analysis model-based specification; requirements analysis; prototyping. 3. Software analysis and design System analysis and models; overview of software design process and strategies; function-oriented design; object-oriented design. 4. Software verification and validation Testing techniques and tools; static analysis; design and code reviews, inspection 5. Project metrics Function point, line of code; COCOMO models; effort estimation.

Teaching/Learning Methodology	Lectures focus on introduction and explanation of key concepts and techniques. Tutorial and lab sessions provide students opportunity to practice the techniques and tools presented in class. Assignments and project allow students to deepen their understanding of the concepts taught in class and apply the theory and techniques to software design and testing. Students will be encouraged to work in groups to share and present ideas, review other's work, and develop teamwork skill.																																																								
Assessment Methods in Alignment with Intended Learning Outcomes	<table border="1" data-bbox="440 443 1382 1070"> <thead> <tr> <th rowspan="2">Specific assessment methods/tasks</th> <th rowspan="2">% weighting</th> <th colspan="5">Intended subject learning outcomes to be assessed (Please tick as appropriate)</th> </tr> <tr> <th>a</th> <th>b</th> <th>c</th> <th>d</th> <th>e</th> </tr> </thead> <tbody> <tr> <td>1. Assignments</td> <td rowspan="4">60%</td> <td>✓</td> <td>✓</td> <td></td> <td></td> <td></td> </tr> <tr> <td>2.
