### Objectives

This subject is intended to provide an opportunity for students to carry out a group project to practise the principles and techniques of IS/IT/ST/EC system research and development. Students achieve the objective through the development of concepts, models, frameworks, and / or a software system that meets stated requirements and quality standards.

### Intended Learning Outcomes

After completing the subject, students should be able to:

a. identify, analyse and solve real life, IS/IT/ST/EC related problems and issues;
b. apply appropriate principles and techniques of requirements, specification, software design and implementation of IS/IT/ST/EC systems;
c. perform collaborate and work effectively in a team environment; and
d. present well-formed technical documentation and project report.

### Subject Synopsis/Indicative Syllabus

Students will group into teams of up to 4 members, and work on an IS/IT/ST/EC project under the supervision of a faculty member. Each group of students will explore an area of IS/IT/ST/EC, either by their own choice or assigned by the supervisor.

Through the project, students will integrate knowledge and techniques they have acquired in preceding and concurrent subjects of study and develop their skill and new knowledge of the selected areas. They will identify some problems to solve, develop solutions, and provide a proof-of-concept for their solutions by developing software prototypes that implement the solutions. Testing cases need to be designed to evaluate the developed systems in the light of system requirements and performance. Students will also exercise project management methods to the planning, developing, and monitoring of progress. Upon completion of the subject, the students will need to communicate their work to others effectively and efficiently, through well-prepared project reports and / or oral presentations and
**Teaching/Learning Methodology**

Students are to work in a group of up to 4 members. Each group is supervised by a faculty member. Students are expected to work independently, show initiative, and take responsibility for the success of their work. They are required to hold regular meetings with the supervisor, at least once per fortnight, and produce regular progress reports as an integral part of the project documentation.

*Duration of course:* Two semesters
