

## Subject Description Form

<b>Subject Code</b>	COMP309
<b>Subject Title</b>	System Programming
<b>Credit Value</b>	3
<b>Level</b>	3
<b>Pre-requisite / Co-requisite/ Exclusion</b>	Pre-requisite: COMP201 and COMP304 Co-requisite/Exclusion: Nil
<b>Objectives</b>	<ul style="list-style-type: none"> <li>• To introduce students the concepts and principles of system programming and to enable them to understand the duties and scope of a system programmer.</li> <li>• To provide students the knowledge about both theoretical and practical aspects of system programming, teaching them the methods and techniques for designing and implementing system-level programs.</li> <li>• To train students in developing skills for writing system software with the aid of sophisticated OS services, programming languages and utility tools.</li> </ul>
<b>Intended Learning Outcomes</b>	<p>Upon completion of the subject, students will be able to:</p> <p><i>Professional/academic knowledge and skills</i></p> <p>(a) organize the functionalities and components of a computer system into different layers, and have a good understanding of the role of system programming and the scope of duties and tasks of a system programmer;</p> <p>(b) grasp the concepts and principles, and be familiar with the approaches and methods of developing system-level software (e.g., compiler, and networking software);</p> <p>(c) apply the knowledge and techniques learnt to develop solutions to real-world problems;</p> <p>(d) select and make use of the OS kernel functions and their APIs, standard programming languages, and utility tools;</p> <p>(e) organize and manage software built for deployment and demonstration;</p> <p><i>Attributes for all-roundedness</i></p> <p>(f) analyze requirements and solve problems using systematic planning and development approaches;</p> <p>(g) write technical project reports in well-organized and logical manner;</p> <p>(h) work in teams and collaborate with classmates.</p> <p><b>Alignment of Programme Outcomes:</b></p> <p>Programme Outcome 1: This subject contributes to having students practice their writing skills with project document and report writing.</p> <p>Programme Outcome 4: This subject contributes to developing student critical thinking through tutorial and lab exercises on solving problems. They will also</p>

	<p>practice more in written assignments, programming exercises, and project.</p> <p>Programme Outcome 5: This subject contributes to problem solving with programming skills through lab exercise and project with proper design and implementation.</p> <p>Programme Outcome 7: This subject contributes to team work with group-based project for students to practice team spirit.</p>	
<b>Subject Synopsis/ Indicative Syllabus</b>	<b>Topic</b>	<b>Duration of Lectures</b>
	<b>1. Introduction to system programming and Unix</b> Layered structure of a computer system; system software and application software; scope and tasks of system programming. Evolution of UNIX; features of UNIX; UNIX standards; good style of UNIX programming.	2.5
	<b>2. Introduction to UNIX Systems</b> Files; types of UNIX files; UNIX file system; structure and representation of files in UNIX file system; directories; accessing files in UNIX; I/O redirection; devices and device drivers; UNIX file interface (APIs). UNIX shell; UNIX process creations and execution; process management; parent and child processes; UNIX process interfaces (APIs).	5
	<b>3. Introduction to Unix Device Driver</b> Device Drivers; design issues; types of device drivers; major components of a device driver.	2.5
	<b>4. Device Driver Development</b> OS/Driver interface; internal operations of a device driver; structure and major components; address spaces and data transfer; typical character/block driver design and implementation.	7.5
	<b>5. Overview of compiler construction</b> Syntax and semantics of programming languages; language translation approaches; tasks of a compiler; the compiler process.	2.5
	<b>6. Lexical analysis</b> Tasks of lexical analysis; specifying tokens by regular grammars and regular expressions; recognizing tokens by Finite Automata (FA); construction of FA from regular expressions; converting NFA to DFA; simulating DFA.	5
	<b>7. Syntax analysis</b> Tasks of syntax analysis; specifying language constructs by context-free grammars; BNF; derivation; parse and syntax trees; recognizing language constructs by Pushdown Automata; top-down and bottom-up parsing methods.	7.5
	<b>8. Code generation</b> Intermediate compilation phases; symbol table; intermediate code generation; code optimization; code generation.	2.5
	<b>Total</b>	<b>35</b>

	<p><b>Tutorials: 3 hours</b></p> <p><b>Laboratory Experiment:</b></p> <table border="1" data-bbox="427 271 1465 517"> <thead> <tr> <th data-bbox="427 271 1273 349">Topic</th> <th data-bbox="1273 271 1465 349">Duration of Laboratory</th> </tr> </thead> <tbody> <tr> <td data-bbox="427 349 1273 389">1.
