

## Subject Description Form

<b>Subject Code</b>	COMP3438
<b>Subject Title</b>	System Programming
<b>Credit Value</b>	3
<b>Level</b>	3
<b>Pre-requisite / Co-requisite / Exclusion</b>	<b>Pre-requisite:</b> COMP2432
<b>Objectives</b>	<p>The objectives of this subject are to:</p> <ul style="list-style-type: none"> <li>• introduce students the concepts and principles of system programming and to enable them to understand the duties and scope of a system programmer;</li> <li>• provide students the knowledge about both theoretical and practical aspects of system programming, teaching them the methods and techniques for designing and implementing system-level programs; and</li> <li>• train students in developing skills for writing system software with the aid of sophisticated OS services, programming languages and utility tools.</li> </ul>
<b>Intended Learning Outcomes</b>	<p>Upon completion of the subject, students will be able to:</p> <p><i>Professional/academic knowledge and skills</i></p> <p>(a) organize the functionalities and components of a computer system into different layers, and have a good understanding of the role of system programming and the scope of duties and tasks of a system programmer;</p> <p>(b) grasp the concepts and principles, and be familiar with the approaches and methods of developing system-level software (e.g., compiler, and networking software);</p> <p>(c) apply the knowledge and techniques learnt to develop solutions to real-world problems;</p> <p>(d) select and make use of the OS kernel functions and their APIs, standard programming languages, and utility tools; and</p> <p>(e) organize and manage software built for deployment and demonstration.</p> <p><i>Attributes for all-roundedness</i></p> <p>(f) analyze requirements and solve problems using systematic planning and development approaches.</p>

**Subject Synopsis/  
Indicative Syllabus**

**Topic**

**1. Introduction to System Programming and Unix**

Layered structure of a computer system; system software and application software; scope and tasks of system programming. Evolution of UNIX; features of UNIX; UNIX standards; good style of UNIX programming.

**2. Introduction to UNIX Systems**

Files; types of UNIX files; UNIX file system; structure and representation of files in UNIX file system; directories; accessing files in UNIX; I/O redirection; devices and device drivers; UNIX file interface (APIs). UNIX shell; UNIX process creations and execution; process management; parent and child processes; UNIX process interfaces (APIs).

**3. Introduction to Unix Device Driver**

Device Drivers; design issues; types of device drivers; major components of a device driver.

**4. Device Driver Development**

OS/Driver interface; internal operations of a device driver; structure and major components; address spaces and data transfer; typical character/block driver design and implementation.

**5. Overview of Compiler Construction**

Syntax and semantics of programming languages; language translation approaches; tasks of a compiler; the compiler process.

**6. Lexical Analysis**

Tasks of lexical analysis; specifying tokens by regular grammars and regular expressions; recognizing tokens by Finite Automata (FA); construction of FA from regular expressions; converting NFA to DFA; simulating DFA.

**7. Syntax Analysis**

Tasks of syntax analysis; specifying language constructs by context-free grammars; BNF; derivation; parse and syntax trees; recognizing language constructs by Pushdown Automata; top-down and bottom-up parsing methods.

**8. Code Generation**

Intermediate compilation phases; symbol table; intermediate code generation; code optimization; code generation.

Tutorials: 3 hours

Laboratory Experiment:

**Topic**

1. UNIX System and C Programming

2. UNIX Programming (processes, files, device drivers)

<b>Teaching/ Learning Methodology</b>	<p>In lectures, concepts, models and algorithms will be explained with illustrative examples.</p> <p>Tutorials and lab sessions help students understand concepts and improve their skills on solving problems.</p> <p>Assignments help develop students' programming skills and critical thinking.</p>																																																												
<b>Assessment Methods in Alignment with Intended Learning Outcomes</b>	<table border="1" data-bbox="384 416 1465 981"> <thead> <tr> <th rowspan="2">Specific assessment methods/tasks</th> <th rowspan="2">% weighting</th> <th colspan="6">Intended subject learning outcomes to be assessed (Please tick as appropriate)</th> </tr> <tr> <th>a</th> <th>b</th> <th>c</th> <th>d</th> <th>e</th> <th>f</th> </tr> </thead> <tbody> <tr> <td><b>Continuous Assessment</b></td> <td><b>55%</b></td> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> </tr> <tr> <td>1.
