

Subject Description Form

Subject Code	COMP 5517
Subject Title	Human Computer Interaction
Credit Value	3
Level	5
Pre-requisite / Co-requisite/ Exclusion	Basic knowledge of programming is required.
Objectives	<ul style="list-style-type: none"> • To provide students with a broad view of both theoretical and practical issues in human factors for design of human-computer interfaces. • To equip students with knowledge and understanding of the nature of human computer interactions, human characteristics, computer system and interface architecture. • To equip students with sound skills in design, development and evaluation of user interfaces.
Intended Learning Outcomes	<p>Upon completion of the subject, students will be able to:</p> <ol style="list-style-type: none"> a. describe the main concepts (conceptual model, metaphors and paradigms) that influence human-computer interaction b. understand how human cognition and information processing impact human computer interaction c. understand different evaluation and testing methods, both quantitative and qualitative d. apply HCI theory, principles and practices to user interface design e. analyze an interactive system using appropriate evaluation and usability testing methods
Subject Synopsis/ Indicative Syllabus	<p>Nature of Human Computer Interaction (HCI) Definitions and importance of HCI; history and intellectual roots of HCI; roles various disciplines play within HCI.</p> <p>Evaluation Role of evaluation; qualitative and heuristic evaluation techniques; empirical evaluation and benchmarking</p> <p>Human Characteristics Perception and representation; models and limits of human memory; mental models; use of metaphors; social and organizational aspects; input and output devices: performance characteristics (human and system).</p> <p>Formal and Conceptual models Task analysis and predictive modeling; dialogue interaction: types and techniques; models for describing interaction processes.</p>

	<p>Design guidelines and metrics User-centered design; structural HCI design and envisioning design; standards and metrics; guidelines to support design; standards and metrics; documentation and on-line information.</p> <p>Development and applications Design rationale; participatory design and prototyping; user interface management systems; WWW application design; groupware; collaborative work and virtual environments.</p> <p>Selected Topics in Advanced HCI Potential topics include: Human-robot Interaction; Ubiquitous Computing; Speech and natural language interfaces; Tangible user interfaces</p>																																	
<p>Teaching/Learning Methodology</p>	<p>Lectures, Tutorials and Labs</p> <p>The subject material will be delivered through lectures, tutorials and labs. Lectures will provide the main body of the subject materials. Where possible, guest lectures and/or case studies will be used to give the subject material more relevancy to real-world scenarios.</p> <p>Tutorials and labs will provide students with more in-depth opportunities to explore the lecture materials and practice the lecture concepts. Where possible, a hands-on, interactive approach will be used.</p> <p>Projects and Assignments</p> <p>Projects and assignments will provide students with in-depth opportunities to practice the lecture concepts, as well as to assess their ability to apply these concepts in practical scenarios.</p> <p>Examinations and Tests</p> <p>Examinations and tests will assess students on their grasp of subject material.</p>																																	
<p>Assessment Methods in Alignment with Intended Learning Outcomes</p>	<p>Students' performance in this subject will be assessed by using a letter-grading system in accordance with the University's convention from grade F (failure) to A+. The relative weights of the different assessment components are as follows:</p> <table border="1" data-bbox="518 1608 1468 2056"> <thead> <tr> <th rowspan="2">Specific assessment methods/tasks</th> <th rowspan="2">% weighting</th> <th colspan="5">Intended subject learning outcomes to be assessed (Please tick as appropriate)</th> </tr> <tr> <th>a</th> <th>b</th> <th>c</th> <th>d</th> <th>e</th> </tr> </thead> <tbody> <tr> <td>1. 	<p>intended learning outcomes:</p> <p>The assignments, tests and examinations will assess students' ability to understand and describe the concepts behind human-computer interaction, as well as various techniques and methods that are used to develop and assess user interfaces.</p> <p>Projects will require students to demonstrate their ability to apply the subject concepts in designing, implementing and analyzing user interfaces.</p>	
<p>Student Study Effort Expected</p>	<p>Class contact:</p>	
	<ul style="list-style-type: none"> ▪ Lectures, tutorials, workshops and labs 	<p>39 Hrs.</p>
	<p>Other student study effort:</p>	
	<ul style="list-style-type: none"> ▪ Assignments, Coursework, Reading, Exams 	<p>65 Hrs.</p>
	<p>Total student study effort</p>	<p>104 Hrs.</p>
